

Appendix C: Extra Tables

All values below are produced by `analysis/analysis-script.py` and correspond to the files in `analysis/outputs/`. Final analytic sample: **N = 122** (all consenting; no exclusions required).

Table C1: Sample Characteristics and Categorical Frequencies

Source: `categorical-frequencies.csv`

Variable	Category	Frequency	Percentage
Year of study	2nd year	18	14.8
Year of study	3rd year	83	68.0
Year of study	4th year	21	17.2
School	Computer Science	76	62.3
School	Management	34	27.9
School	Mathematics	12	9.8
Searched for internship	Yes	96	78.7
Searched for internship	No	26	21.3
Completed internship	Yes	41	33.6
Completed internship	No	81	66.4
Used support	Yes	38	31.1
Used support	No	84	68.9

Table C2: Service Evaluation Means Among Support Users

Source: `scale-means.csv` — support users only (n = 38)

Item	Mean	Standard Deviation	n
Industry connections	3.26	0.92	38
Communication quality	3.03	1.13	38
Accessibility	3.00	0.81	38
Application support	2.97	0.88	38
Information availability	2.87	0.84	38
Overall satisfaction	2.82	0.98	38
CV support	1.92	0.91	38
Interview support	1.55	0.80	38
Composite satisfaction score	2.68	0.56	38
Support readiness impact (<i>analysed separately</i>)	2.95	0.93	38

Table C3: Specific Services Used

Source: `analysis-summary.md` — support users only (n = 38; multiple selections allowed)

Service	n	% of users
Internship information or announcements	36	94.7
One-to-one advising	5	13.2
Employer or alumni events	4	10.5
CV or resume support	3	7.9
Application support	3	7.9
Interview preparation	2	5.3
Other	4	10.5

Table C4: Reasons for Non-Use

Source: `categorical-frequencies.csv` — non-users only (n = 84)

Reason	n	% of non-users
I did not know the services existed	27	32.1
The available services did not seem relevant to my field	18	21.4
I did not know how to access them	16	19.0
I planned to use them later	13	15.5
I knew about them but did not need them	8	9.5
Other	2	2.4

Table C5: Improvement Priority

Source: `categorical-frequencies.csv` (N = 122)

Improvement	n	%
Earlier communication about internship opportunities	47	38.5
One central internship information platform	26	21.3
More employer and alumni networking events	18	14.8
More school-specific internship guidance	15	12.3
More mock interview practice	7	5.7
More CV or resume support	7	5.7
Other	2	1.6

Table C6: Readiness Items

Source: `scale-means.csv` (N = 122)

Item	Mean	Standard Deviation	n
CV confidence	3.20	1.11	122
Interview confidence	3.00	1.19	122
Employer expectations	2.76	1.06	122
Finding confidence	2.60	1.04	122
Composite readiness score	2.89	0.85	122
Awareness score (<i>single item</i>)	2.92	1.32	122

Table C7: Welch t-test Result

Source: `readiness-by-support-usage.csv` and `ttest-results.csv`

Group	n	Mean Readiness	Standard Deviation
Used support services	38	3.23	0.70
Did not use support services	84	2.74	0.87

Test result:

- Mean difference: 0.50
- 95% CI: [0.20, 0.79]
- Degrees of freedom: 88.06
- t-statistic: 3.3585
- p-value: .0012
- Cohen's d: 0.604 (medium effect)
- **Decision: Reject Ho** at the .05 significance level

Table C8: Normality Check

Source: `normality-results.csv`

Variable	Test	n	W	p-value	Normal at .05
Readiness score	Shapiro–Wilk	122	.983	.130	Yes

Table C9: Correlations

Source: `correlation-results.csv`

X	Y	n	Pearson r	p	Spearman ρ	p
Awareness score	Readiness score	122	.429	< .001	.436	< .001
Year of study	Readiness score	122	.272	.002	.263	.003

Table C10: Reliability Checks

Source: `reliability-results.csv`

Scale	Items	Complete Responses	Cronbach's Alpha
Readiness items	4	122	.771
Service evaluation items	8	38	.767

Reporting Caution

Because this project used a cross-sectional convenience sample, the readiness comparison must be described as an **association** in the surveyed sample. Do not claim that support-service usage caused higher readiness.
